

NEW Backup and Disaster Recovery System!

Backup and Disaster Recovery processes and systems have, for years, put small/mid-sized businesses at a disadvantage. There has always been a way to completely and conveniently secure data; however, it has not been affordable for the average business. The CCP engineers have found a product that accomplishes "Near Real-Time Backups" at an affordable price.

Key Features

Eliminates backup tapes! Transfer data seamlessly without employee involvement. You can get rid of those expensive, time-consuming backup tapes! Transmission of data occurs over your Internet connection, and can easily be configured to minimize bandwidth consumption. Our NAS (Network Attached Storage) device leverages Adaptive Bandwidth Throttling so your internet usage will always run at top speed.

Includes a specialized backup and virtual server appliance designed to reduce server down time. If any of your servers fail, our server virtualization technology allows applications to be restored and rebooted within two hours. Your business can be up and running while vendors and technicians replace, or repair your servers.

Allows near real-time backups almost every 15 minutes. (Incremental Forever Methodology) Our methodology captures your data in an image format about every 15 minutes. It not only backs up recent data sets, but also allows end users to reconstruct the state of their data as it stood at the end of various 15-minute restoration points.

Offers offsite storage at an affordable cost. After imaging the servers the NAS (Network Attached Storage) device creates a 256-bit encrypted tunnel and transmits the data to a secure offsite location. The data at that remote site then replicates again to an alternate data center, creating a total of three copies of the data in three geographically distinct regions.

Provides a low cost, speedy disaster recovery process. Little to NO DOWN TIME! Your people are back to work with in minutes! A good backup system should allow for quick flexible restores. Our solution allows for recovery of files, folders, partitions, mailboxes, and databases using a quick and intuitive process.

Data is encrypted for security. Since the data is encrypted and only you have the key, no one has access at any of the remote storage facilities. We employ the 256-bit Advanced Encryption Standard (AES) algorithm because it has never been broken, and is currently considered the gold standard of encryption techniques. Your data is immune to theft!

CCP manages the process so your employees don't have to! This system is effortless for the client. You no longer need to have designated "tape changer". Backups do not have to be set, or run in the evening and there is no chance of backup failure. If there is a pause in the system, our engineers are notified within minutes. We monitor your system 24/7/365!

Affordable Cost

CCP offers a pricing package that includes backup, disaster recovery service, NAS device, Incremental Forever Methodology, file restorations, file integrity checks, secure data transmission and remote storage. ONE EASY MONTHLY COST!
